

## **Transcript – FCA Graduate and Interns discuss what is unique about the FCA Graduate programme.**

### **What is unique about the FCA graduate programme?**

**Chloe Jordan, Intern, Supervision team:** The FCA really offers a unique experience for STEM graduates. They allow you to play to your strengths but then they also work on your weaknesses, and they know my strengths are in mathematics and data handling.

They've really helped me to improve other areas of myself, including the more firm-facing work. I think that's helpful and it's made me push myself to do better which I think is really crucial.

**Wasif Navil, Graduate, Supervision team:** What is quite unique about the FCA, you get such a broad understanding of how the financial industry works because you're not stuck in one corner of the financial industry.

As part of the grad scheme you rotate and you get to experience different parts of the financial industry, you're exposed to different products, you're exposed to different sectors. So you get an understanding of how they cater to the consumer and what the harms are.

So I think that is a really unique opportunity.

**Secure a smarter future.**
